College algebra Volume 72, no. 36

By William Henry Metzler

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 46 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: . . . that of the first series, hence this remainder will also approach zero as a limit, and therefore either series will be convergent. 199. As explained in 120, when x is real, the symbol x denotes the numerical or absolute value of x ; thus, -21^2 and 121^2 . 200. We shall now consider the convergence of the geometric series $1 + x + x^2 + \dots$. By division, or by the theory of the sum of a geometric series, $1 - x^n$. There are three cases to consider according as $a > 1$, $a = 1$, or $a < 1$. First, when $a > 1$. In this case $x^n \rightarrow 0$ as n becomes indefinitely great. The denominator, $1 - x$, is constant. Therefore $x^n \rightarrow 0$. Hence the limit of the sum of n terms as $n \rightarrow \infty$ becomes indefinitely great is ∞ , which is a finite and determinate limit. Therefore by the...

Reviews

This pdf is wonderful. It is definitely simplified but excitement from the 50 percent in the ebook. You won't sense monotony at any time of your time (that's what catalogues are for relating to should you request me).
