By Charles Lynch

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 edition. Excerpt: .and deaths. The ordinary trolley wire carries a current of about 500 volts, and incandescent and arc-light currents run from 2500 to 3000 volts. The passage of these powerful currents through the body causes dangerous shock or even death. HOW TO RESCUE PERSON FROM CONTACT WITH ELECTRIC CURRENT (When possible the rescuers should Stand on Dry Wood or Cloth) PLATE XXVI.---Rescue methods (electric). Prevention.--The third rail is always dangerous, so avoid it. Swinging wires of any kind may somewhere in their course be in contact with live wires, so they should not be touched. Electric wires must always be carefully avoided. Symptoms.--Are due to paralysis of the nerve center in the brain which governs breathing and in consequence are those of suffocation. Sudden loss of consciousness occurs when a powerful electric current passes through the body. The breathing may be entirely stopped or...
